

BALAJI S

Full Stack Developer | .NET • Angular • SQL Server

+91 7338979707 | balajisrini013@gmail.com | linkedin.com/in/bala013ibis | Chennai, Tamil Nadu, India

PROFESSIONAL SUMMARY

Results-driven Full Stack Developer with 2.5+ years of experience designing and delivering enterprise-grade applications using C#, ASP.NET Core, Web API, Angular, and SQL Server. Proven track record in RESTful API development, IIS deployment, database optimization, and third-party service integration. Experienced in Agile/Scrum delivery with measurable impact: 30% improvement in system efficiency and 40% reduction in production bugs. Currently expanding expertise in AI/ML integration and Azure cloud services.

TECHNICAL SKILLS

Backend	C#, ASP.NET Core, .NET Framework, Web API, Entity Framework Core, LINQ, Dependency Injection, Middleware, JWT Authentication, Microservices
Frontend	Angular 14/15/16, TypeScript, JavaScript, RxJS, NgRx, Component Architecture, HTML5, CSS3, Bootstrap, SPA Development
Database	Microsoft SQL Server, T-SQL, Stored Procedures, Query Optimization, Indexing, SSMS, MySQL
DevOps / Deploy	IIS (App Pools, SSL Bindings, Site Config), SVN, NUnit, Unit Testing, TDD, Agile/Scrum, Sprint Planning, Code Reviews
AI / Cloud	Python NLP, Text Processing, Document Intelligence, LLM Integration, Azure Services (expanding), Flask/Django (in progress)
Integrations	Authbridge, Emsigner, Naukri API, RESTful Services, JSON, XML
Tools	Visual Studio, VS Code, GitHub Copilot (AI code completion & pair programming), Claude AI (prompt-driven development & code review), Antigravity (workflow automation & productivity)

WORK EXPERIENCE

Platform Engineer (Full Stack Developer) | [Adrenalin E-Systems Limited — Intellect Group](#)

August 2023 – Present

Backend & API Development

- Designed and developed reusable RESTful Web APIs in C# ASP.NET Core for HR modules — Talent Development, Acquisition, Operations, and Engagement — within the Adrenalin JASON Integration Framework
- Integrated third-party services (Authbridge, Emsigner, Naukri API) into backend workflows and Angular frontend components, enabling automated data verification and document processing
- Optimized SQL Server stored procedures and queries, delivering a 30% improvement in system efficiency across integration workflows
- Implemented dependency injection, middleware pipelines, and JWT authentication to build secure, maintainable .NET Web API solutions

IIS Deployment & Application Maintenance

- Deployed and maintained ASP.NET Core applications on IIS — configured application pools, site bindings, SSL certificates, and environment-specific appsettings
- Reduced production downtime by proactively diagnosing deployment issues, monitoring application health, and applying hotfixes in a timely manner
- Maintained deployment documentation and contributed to structured release processes within an Agile sprint cycle

Frontend Development (Angular)

- Built and enhanced Angular components integrated with .NET Web APIs, improving usability across multiple HR platform modules using TypeScript, RxJS, and NgRx
- Implemented NUnit automated testing framework, reducing production bug reports by 40% through test-driven development practices
- Accelerated development velocity by leveraging **GitHub Copilot** for AI-assisted code completion, **Claude AI** for prompt-driven development and code reviews, and **Antigravity** for workflow automation — reducing repetitive coding tasks and improving overall sprint throughput

AI Feature Development

- Developed a Python NLP-based Resume Matcher for candidate-job matching, integrated with the existing HR platform for intelligent automated screening workflows
- Built a Document Q&A system using Python text processing and information retrieval algorithms for knowledge extraction from uploaded documents
- Architecting Flask/Django microservices to expose AI capabilities within the broader .NET and IIS application stack

KEY PROJECTS

Adrenalin JASON Integration Framework

- Full-stack development of an enterprise HR integration framework using C# ASP.NET Core, Angular, and SQL Server
- Developed and deployed RESTful Web APIs for multiple HR modules on IIS; integrated third-party services with secure SSL bindings and role-based access control
- Collaborated in sprint planning, code reviews, and production release cycles within an Agile/Scrum team, ensuring on-time and high-quality delivery

Resume Matcher System

- Built a Python NLP-powered resume screening tool integrated with the Angular/ASP.NET Core HR platform for automated candidate evaluation
- Reduced manual screening effort significantly by enabling intelligent candidate-job matching at scale using text processing and similarity algorithms

Document Q&A System

- Designed and built an intelligent document search and Q&A engine using Python text processing and retrieval algorithms
- Architected as a standalone microservice for deployment within the .NET and IIS application ecosystem

EDUCATION

Bachelor of Engineering — Computer Science and Engineering

Sri Sairam Institute of Technology, Chennai, India

2018 – 2022

ACHIEVEMENTS & RECOGNITION

- Delivered multiple external partner integration projects on schedule, contributing to a 30% improvement in system efficiency across integration workflows
- Implemented automated testing framework (NUnit) that reduced production bug reports by 40%, improving release quality and reducing regression cycles
- Recognized for problem-solving, timely delivery, and cross-functional collaboration across Agile sprints and production deployments
